"The Frayer Model is based on a student's prior knowledge".It helps students make connections between new concepts. The Model creates a visual reference. Students can learn to compare attributes and examples (adapted from the source). The Frayer Model works very well for the mathematical vocabulary also in this sixth grade example. The Frayer Four-Square Model The Frayer Model puts the vocabulary students need to learn at the center of the diagram. Students then consider and describe the word or concept. According to the Reading Educator, some of the ways include: Defining the term Describing its essential characteristics Providing examples of the term Offering non-examples of the term Listing subordinate, superordinate and coordinated terms In the early days of the Frayer Model, an organization was not used. graphic designer. Others adapted it and reduced the frame to five steps (source), which is shown in the organizer below. As a result of this set format, they are easy to duplicate and prepare. Example # 2: Eduprotocols Thanks to the creators of EduProtocols, this Google Slides document offers many templates. Each template focuses on one aspect or use different from the frayer model. These aspects include, for example, description, comparison / contrast, cause and effect, problem / solve, and others. Example # 3: Meredith Akers Special Acknowledgments to Meredith Akers for making a model Frayer Collaborative Slide Deck. She shared her version through Twitter, and you can make a copy of her easily. You can see what was happening below: You can find many examples of Frayer models on the TwitterVerse.
