# How to share your screen on discord

How to share your screen on discord with audio. How to share your screen on discord ipad. How to share your screen on discord with sound. How to share your screen on discord laptop. How to share your screen on discord mobile. How to share your screen on discord macbook. How to share your screen on discord mac. How to share your screen on discord xbox.

Discord finally added screen sharing to its Android and iOS apps. Now you can share the mobile device screen with a maximum of 50 in 50 other voice or video call channels. DisCord is mainly marketed as a game-focused app, so the ability to share your device screen with others so it brings obvious appeal to its users: You can transmit the gameplay from your mobile device or show your D & D group a map of the Dungeon where they are, for example. But there are a lot of non-game uses also for screen sharing. Many people use discord as a free alternative to telework apps such as Zoom and loosening, which means that you will now be able to share a presentation from your iOS or Android device while it is in a voice or video meeting. It is also a way to easily share photos, videos or other media with your loved ones if they also use the app. That's how to do it. How to joke Share in the Discord app on Android and iOS to start, update your Discord app or download the latest version from Google Play (Android) or Apple App Store (iOS). The discord is increasing the screen sharing function, so you can access it immediately. If this is the case, do not despair: You shouldn't wait long to get it. From opening the Discorder app, then join a voice channel or a video call. Tap The "Screen share" icon from the Call Controls dialog box. Explain how screen sharing works. Tap "Start screen sharing". To start. The app will notify you once again that you are about to share your screen with others. If you are ready to share what is on your screen, tap "Start now". The app will wrap up in a new screen that shares the user interface, but you can exchange other apps and use your phone as normal While the discredites to your viewers in the background. When you are ready to stop, select "Stop screen sharing", screen sharing allows your viewers to see everything displayed on your phone or tablet screen in real time (unless an app does not allow access to screen sharing). While this will make youtube look with your discord much easier, it also means that everyone will see your notifications or other potentially sensitive material if it is visible on the screen. Make sure to close all apps you don't want to accidentally exchange and turn on and turn on the mode do not bother to silence notifications before sharing. Skype is one of the best free internet phone apps. If you are a greedy skype user, you can attest its size. But there are many other additional features to enjoy other video chat. One of the most useful features of Skype is the ability to share the screen on the app. All you need is a click of a button and you can invite more family and friends to the conversation. How to share your screen on Skype (PC) Most likely using the classic desktop software if you run an operating system that something different from Windows 10. Fortunately, Microsoft offers us a unified experience, even between both versions. They look and act the same way, so deciding on one version on the other really reduces to our personal preferences. With this in mind, this guide applies to the Skype versions that Windows offers, although the screenshots included represent the classic desktop software. Step 1: Start the call by selecting a contact on the list of recent chats and clicking on the phone icon in the top right corner. Step 2: The next step depends on the video call. With recent hidden chat panels, see a screen iconDouble team on the Hideaway toolbar. Click the icon to proceed. If the recent chat panel remains open during the call, click on the three-point options icon on the HIDEAWAY toolbar. Select the Sharing screen option in the pop-up menu. Step 3: The sharing screen interface temporarily replaces the call screen. If you only have a screen, you will probably see only one window. For PC with two or more screens, click on the screen you want to share and click the Start Sharing button. You also see a switch to scroll the PC sound. Kevin Parrish Step 4: Now you are sharing your screen! A small red line appears around the limits of the selected screen, indicating that it is currently streaming your contact. For PCs with multiple screens, you can switch from one screen. Click the Sharing Options screen or more "Options" depending on the current view "Options", and then select the switch screen or window entry in the pop-up menu (see the Screenshot in step 5). Step 5: To stop sharing, click the Double-screen icon and select the Stop Sharing option in the pop-up menu. Use this method during calls with the recent chat panel closed. If the recent chat panel remains open during the call, click the icon for additional three-point options and select the Stop Sharing option in the pop-up menu. How to share the phone screen on Skype screen sharing is available on most modern devices, including iPhone, iPad and Android hardware, but this guide focuses on the screen sharing process using an iPhone X. Step 1: call by clicking Clicking on your contact list. Press the phone icon located in the upper right corner of the window. Step 2: While the call is streaming, touch the screen and an icon will appear in the lower right corner of the screen. Touch it and you will open a menu. Step 3: Select the Share screen icon from the menu, and a screen will open. Step 4: Touch the Skype list, then the Start Broadcast button. Step 5: Your contact can now see your screen. You can convey what you wanted to share by passing the appropriate app. Open Skype again and tap the stop transmission and the transmission ceases. Once you get a little more comfortable to share your screen on Skype, you may be interested in learning how to record your favorite calls. Recommendations of publishers Fri, 15 October 2021 | Updated 09.52am iStgadgets NowNewsFaghow can I share my screen in Google meeting? Copyright © 2021 Bennett, Coleman & Co. Ltd. All rights reserved at the time of India. For reprinting rights: Times Syndication Service Blackzheep / SHUTTERSTOCK As Macs have built-in screen sharing, you can share the screen with another Mac on the local network via the integrated VNC server or on the Internet via iMessage. Even third-party apps, such as TeamViewer, even work on MacOS and Windows. What option is right for you? There are three options you can choose to successfully share your screen, view another person screen or check a remote Mac. The screen sharing function integrated on MacOS is ideal for sharing the screen with another Mac on the local network. You can also use this method to take full control of a remote Mac, even if it doesn't work natively on the Internet. If you want to share your screen with someone on another mac on the internet, give iMessage a shot. Start a FaceTime call at the same time, so you can also talk to the person on the other side. You can share your screen, give up control or invite the other part to check your Mac. If you know the Apple ID of the other person, you can also connect directly via the screen sharing app. Finally, third-party apps, such as TeamViewer work well on MacOS, and also have customers for Windows, Linux and mobile platforms. You can use TeamViewer to connect two machines from any combination of operating systems and hardware, remotely to the Internet. If you want to share the screen with a computer not This is the option for you. Share your screen locally with another Mac There are all kinds of reasons you might want to connect to a Mac on the local network. Here are some examples: you have a Mac that acts as a server that is difficult to access. You're downstairs on the couch and you need to recheck something on your working machine upstairs. I have taken the role of technical support for your whole family and want to make life easier for yourself. Manage a small business, but your ownThe network is not actually the small one. If you want to share your Mac screen with another Mac on your local network, it's easy and requires only one second to configure. Once your Mac has been configured to allow screen sharing on the local network, you can connect every time it is turned on. Configure your Mac for remote access Follow these steps to configure your Mac: go to System Preferences> Sharing. In the left box, search "sharing", and then select the check box next to it. Take note of the computer name, its host name (for example, your MacBook Pro.Local) and the VNC address (for example, EG, VNC: //10.0.0.5). You can also click "Comfort settings", which enables both settings. Then set a secure password. Keep in mind if you enable remote management, you cannot activate the screen sharing. You can leave the remote management enabled (and configure it similarly) as the instructions to access Macs are identical. Under "Comfort settings", you may need to enable the following options: Anyone can request permission to check the screen: this means that the person linking the won't is not necessary to type the Your Username and Mac Password to control your computer. He or she simply can request control, and then you can grant it manually. VNC spectators can check the password screen: If you enable this, it allows anyone to connect to the Mac via a standard VNC standard, such as Tigervnc. However, he or she will have to know the VNC address (for example, VNC: //10.0.0.5) to connect. You can change those who have access to screen sharing, but, for the good of simplicity, we advise you to leave this set up "all users." As long as you set a password for VNC control to "Comfort Settings", your computer should be protected. Access to the shared screen can now access your Mac from another on the local network. There are several ways where you can do this: the launch of the finder, scroll down the sidebar until you see "Locations" (click "Locations" to show, "Locations" if necessary). Search the computer you want to log in (you may have to click on Network to view it). Click (or double-click) of the computer, click "Share Screen", and then wait to connect. Start Finder, then click Go> Connect to the server in the menu bar. Type the VNC address or host name you have previously noticed, then click Connect. If the same Apple ID has been recorded on both Macs (ie, yours have yours), the sharing session starts immediately without a prompt. If Connect to a car that you are not logged in with your Apple ID (I.E., belongs to another family member or a colleague), you need to log in to that computer with a valid user name and password. The Apple screen sharing function uses a built-in VNC server, which means that you can also use any VNC Viewer app to connect and control the Mac from a non-Apple device. Make sure you enable "VNC spectators can control the screen with the Password" option, set a password in "Comfort settings", and then use an app like TigervNC to connect. Because you are sharing your screen locally, you should enjoy a relatively smooth performance. The screen resolution should be high enough for you to see what you are doing. It is possible (if you open the 5900 port) To connect to a remote computer via VNC on the Internet, but this is a bad idea. When you open the Mac VNC port on the internet, ask only problems. There are ways more and easier to access your computer remotely. Share your screen on the Internet through iMessage thanks to the wonders of the iMessage and Apple Messages App, you can easily share your screen with someone else who has a Mac, iPad or iPhone. Follow these steps to do so: start a chat with the person you want to share the screen with. Click "Details" in the upper right corner of the chat window. In the displayed overlap, click the screen sharing button (it looks like two overlapping rectangles) next to the person's name. Click "Invite to share my screen" or "Ask Screen Share" to see the other person. After the other person accepts your request, a FaceTime audio call begins. To allow the other side of checking the Mac, click the screen sharing button in the menu bar, then click "Allow [Contact] to check my screen." Note that you should never allow someone else to control your Mac unless he doesn't trust that person. To revoke control anywhere, click the Share screen button and disable this option. Screen sharing (or request access to someone else) on the Internet may test your patience. If both parties have fast internet connections, it should be a regular process. If there is a scarce connection in the mix, though, you can feel like a presentation. Connect directly to another Mac by sharing the screen to launch the built-in screen sharing app, press Command + Space to open Spotlight search, type "screen sharing," and then press Enter. You will be asked to type a host name (like a local VNC or Mac connection), or an Apple ID. If you know the Apple ID of the person to whom you want to connect the computer (and vice versa), you can connect directly. Type the Apple ID of the other person in the box and then press Enter. Apple performs the rest from the last known IP address used by Mac. iMessage is a good fallback for this, particularly as it allows you to chat on the problem in real time. Share your screen with a Windows PC or another device and if you want to share the screen with someone who doesn't have a Mac? Fortunately, it's quite easy to do it via a third-party remote desktop tool. There are many of these available, but TeamViewer is recommended. Free for personal use, easy to use, available for most platforms, and you don't need to register to use it. First, download and install TeamViewer's remote access to the machine you want to check and the machine you are connecting. When prompted, grant the TeamViewer permission to control the Mac under Settings> Security and Privacy> Privacy> Accessibility. When you start TeamViewer, you see a unique identifier number and password. You can use these credentials to connect, view the screen of, and check a Mac from a Windows or Linux machine, or even a mobile device, like an iPhone, until it is associated with the TeamViewer app. If you want to connect to the unattended remote machine, you need to register for TeamViewer, and then follow the instructions in the app to set unattended access. Subsequently, the application lists any shared computer, and you can connect with a click. Screen sharing made easy to share the screen is useful when you need assistance with a computer problem. If you also have remote access to the other Macs in your home, you can check everything from a device. If you set the remote access software (such as TeamViewer), you can access the working PC, even if you are on the other side of the world. If you have a Windows PC you want to set the same way, Microsoft also has a specific Windows tool suite for screen sharing and control remote computers. computer.
